OBJECTIVE: Detail-oriented Computer Science student seeking an opportunity to apply technical knowledge and gain hands-on experience in IT and software environments. Strong foundation in troubleshooting, networking, software development, and Microsoft technologies, with proven communication and customer service skills. Adaptable and eager to solve technical problems, support end users, and contribute to reliable and efficient technology solutions.

PROJECT WORK:

- **Java Banking Application (2025):** Developed a console-based banking system in Java that allowed users to create accounts, deposit/withdraw funds, and track balances. Implemented object-oriented design principles (classes, inheritance, encapsulation) to ensure clean and reusable code.
 - **Driver Mobile Application (2025):** Collaborated in a team to design and develop a driver focused mobile application, contributing to feature planning, interface design, and implementation. Participated in task delegation, version control, and iterative development, demonstrating teamwork, communication, and problem-solving in an agile-style environment.
 - **C# Inventory Management System (2025):** Built a small-scale desktop application using C# and .NET for managing product stock levels, including add/remove functionality and data persistence with text files. Demonstrated ability to handle user input validation and error handling.
 - **Networking & Systems Coursework (2025):** Applied foundational knowledge of operating systems and networking concepts in lab settings, analyzing system behavior and documenting solutions.
-

HIGHLIGHTS & SKILLS:

- Foundational knowledge of programming (Java, JavaScript, C#, C++, python) and hands-on experience with software troubleshooting, debugging, and problem analysis.
 - Proven teamwork and collaboration skills from school experience, coordinating small teams and supporting customer-focused operations.
 - Exposure to Microsoft technologies including Office Suite and Git/GitHub; keen interest in expanding knowledge of PowerApps, Dynamics 365, and Power Automate.
 - Strong problem-solving and critical thinking skills demonstrated through academic projects, including developing software applications and implementing object-oriented design.
-

EDUCATION:

Bachelor of Computer Science (Honours)
Conestoga College, Waterloo Campus

2024 – Present
